

# Daily Multibagger Coverage Report — 2026-09-14

One stock picked at random, without repeats until each list cycles through, from four market-cap bands. **Nifty 50 is a reliable list; the Midcap 100 / Smallcap 250 / Microcap 250 lists are hand-curated representative samples, not a live scrape of the official NSE index membership** — those official sources were unreachable from this environment. Every figure below is tagged by the framework's own Tier 1-5 source hierarchy in the underlying dossier files (multibagger/sample\_data/daily/\*.json); most of today's figures are Tier 3 (aggregator-via-search) or Tier 5 (reconstructed/approximate), **not** Tier 1/2 verified. Treat this as a directional screen, not investment research.

---

## Nifty 50 — State Bank of India (SBIN.NS)

Financials — Public Sector Bank (BFSI)

```
`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): 2.0x / 5yrs = 14.9% p.a. -> EPS CAGR 16.7% x re-rating -1.5% | earnings share 111.1% Engine growth (5e): ROIIC 1120.1% x RR 2.2% = 24.2% vs 16.7% required revenue-driven CAGR — CLEARS (see BFSI note) Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — not a scored concept for a lender Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (72.0/100) Price vs bridge: BELOW Failed gates: Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``
```

**Why:** India's largest bank, with a genuinely strong CASA/distribution franchise (switching costs, efficient scale both GREEN) — but no moat source rates BUILDING; system market share is flat-to-slowly-eroding versus faster-growing private banks, so the trajectory gate fails on substance, not sourcing. No credible mispricing case exists for arguably the most heavily-covered, most widely-owned stock in India — its asset-quality recovery is old news, already reflected in the multiple. N7 left honestly unanswered.

**BFSI note:** the ROIIC figure (1120%) is the same known Section 5e artifact flagged for South Indian Bank yesterday — a lender's tiny fixed-asset base relative to earnings mechanically inflates this metric. Not treated as a real signal; doesn't change the outcome.

**Data quality:** Well-sourced (Tier 3): PAT FY21-25, CAR (~14.25%), CASA ratio (~39%), net/gross NPA, ROE, government holding (57.43%), current price/market cap/P-E/P-B. Flagged Tier 5: FY23/24 revenue, most of the non-interest balance-sheet series, shares outstanding. A genuine ~30% inconsistency between a CARE-agency net-worth figure and the P/B-implied book value was found and disclosed rather than silently reconciled.

---

## Nifty Midcap 100 (sample) — The Indian Hotels Company Limited (INDHOTEL.NS)

Consumer Discretionary — Hospitality (Taj Group, Tata Group)

```
`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [6 of 10] Return bridge (N1): 2.5x / 7yrs = 14.0% p.a. -> EPS CAGR 19.6% x re-rating -4.7% | earnings share 136.9% Engine growth (5e): ROIIC 48.3% x RR 7.8% = 3.8% vs 17.9% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): Implied profit-pool share at target 40.6% > 25% — RED Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (80.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Runway/profit pool, Variant perception, MQF governance ``
```

**Why:** A genuine, well-documented V-shaped COVID recovery — consolidated revenue from a Rs1,575Cr trough (FY21, net loss) to a record Rs9,971Cr/Rs2,084Cr PAT (FY26), debt nearly eliminated, 16 consecutive quarters of records. But the recovery and asset-light (Ginger/management-contract) pivot are already mainstream, well-covered facts priced into a rich ~49x trailing P/E. Moat rated honestly mixed — Taj brand equity real, but switching costs and network effects correctly RED (a hotel guest has zero lock-in). No credible edge left, so N7 honestly unanswered.

**Data quality:** Well-sourced (Tier 3, cross-confirmed via IHCL's own results announcements): revenue/PAT all 6 years, several margins, debt/cash anchors. Flagged Tier 5: depreciation/interest/OCF/capex/working-capital series, sector PE, ADTV, profit pool. Explicitly flagged: the ROIIC figure is mechanically inflated by using a COVID-trough base year.

---

## Nifty Smallcap 250 (sample) — Caplin Point Laboratories Limited (CAPLIPOINT.NS)

Pharmaceuticals — Branded Generics (LatAm) + US Injectables

```
`` FINAL CALL: AVOID Compounder tier: IGNORE Engine verdict: WEAK – consolidated gates passed [6 of 10] Return bridge (N1): 3.0x / 5yrs = 24.6% p.a. -> EPS CAGR 25.2% x re-rating -0.5% | earnings share 102.4% Engine growth (5e): ROIIC 59.8% x RR 22.0% = 13.1% vs 23.4% required revenue-driven CAGR – FAILS Moat class (5b): WIDE – MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated – cannot evidence gate Industry phase (6A): INFLECTION – clears MQF governance: ACCEPTABLE (77.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Moat trajectory, Runway/profit pool, MQF governance ``
```

**Why:** Genuinely debt-free, cash-rich (~Rs2,726Cr liquid assets), high-ROCE (26-29%) business with real US-injectables growth (Caplin Steriles +28.7% YoY, 10 new ANDA approvals). A credible, dated variant-perception case was built (US fixed-cost operating leverage + thin institutional ownership) — but the moat evidence, while directionally real (multi-year drug registrations as a re-entry barrier), is only Tier 4/5 (management narrative/media), not Tier 1-3, so the trajectory gate correctly fails on sourcing quality under the framework's own M6 rule — not a bug, an intended consequence of insisting on real evidence.

**Data quality:** Well-sourced (Tier 3): FY23/FY26 revenue+PAT anchors, debt-free status, FY26 cash figure, ROCE band, promoter holding (70.57%, stable). Flagged Tier 5: FY22/24/25 back/forward-cast figures, full balance-sheet series.

---

## Nifty Microcap 250 (sample) — Sharda Cropchem Limited (SHARDACROP.NS)

Materials — Agrochemical Formulations (registration-led, asset-light)

```
`` FINAL CALL: AVOID Compounder tier: IGNORE Engine verdict: WEAK – consolidated gates passed [7 of 10] Return bridge (N1): 3.0x / 5yrs = 24.6% p.a. -> EPS CAGR 8.8% x re-rating 14.5% | earnings share 38.2% Engine growth (5e): ROIIC 67.2% x RR 51.6% = 34.7% vs 7.7% required revenue-driven CAGR – CLEARS Moat class (5b): WIDE – MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated – cannot evidence gate Industry phase (6A): INFLECTION – clears MQF governance: ACCEPTABLE (69.5/100) Price vs bridge: AT Failed gates: Runway/profit pool, Return bridge closes, MQF governance ``
```

**Why:** The day's most interesting case — this is the second name today whose engine growth actually clears (34.7% vs 7.7% required), on a genuine recovery from a brutal FY24 destocking crash (PAT collapsed 91% to Rs32Cr) back to a record FY26 (revenue Rs5,268Cr, PAT Rs681Cr, ROCE 30.4%, debt-free). 2,994 product registrations across 80+ countries is a real, evidenced intangible-asset moat. But it still lands at AVOID: the return bridge fails N1's earnings-dominance test (only 38.2% of the required return would come from earnings, the rest from an assumed re-rating that N1-1 says can't carry a Multibagger verdict), and governance is only ACCEPTABLE given real earnings-quality and customer/geography concentration concerns (83-85% of revenue from Europe/NAFTA).

**Data quality:** Well-sourced (Tier 3): FY25/FY26 revenue+PAT+EBITDA, ROCE, promoter holding, institutional ownership (~12%). Flagged Tier 5: FY23/24 EBITDA and the full balance-sheet series — explicitly noted that the engine's internally-computed ROCE will diverge from the company's real reported 30.4% because of this reconstruction.

---

## Today's summary

| Band                  | Stock               | Engine verdict             | Compounder tier | Final call |
|-----------------------|---------------------|----------------------------|-----------------|------------|
| Nifty 50              | State Bank of India | WEAK (clears engine, BFSI) | WATCH           | WATCH      |
| Midcap 100 (sample)   | Indian Hotels       | WEAK                       | WATCH           | WATCH      |
| Smallcap 250 (sample) | Caplin Point Labs   | WEAK                       | IGNORE          | AVOID      |
| Microcap 250 (sample) | Sharda Cropchem     | WEAK (clears engine)       | IGNORE          | AVOID      |

No BUY or ACCUMULATE again today. Notably, two of today's four (SBI, Sharda Cropchem) actually *cleared* the Section 5e engine-growth gate — the hardest gate in the suite per the framework's own cross-sector backtest — but were still stopped by the return-bridge, runway, or moat-sourcing-quality gates. That's the consolidated gate table working as designed: no single strength routes around every other check.
