

# Daily Multibagger Coverage Report — 2026-09-15

One stock picked at random, without repeats until each list cycles through, from four market-cap bands. **Nifty 50 is a reliable list; the Midcap 100 / Smallcap 250 / Microcap 250 lists are hand-curated representative samples, not a live scrape of the official NSE index membership** — those official sources were unreachable from this environment. Every figure below is tagged by the framework's own Tier 1-5 source hierarchy in the underlying dossier files; most of today's figures are Tier 3 (aggregator-via-search) or Tier 5 (reconstructed/approximate), **not** Tier 1/2 verified. Treat this as a directional screen, not investment research.

---

## Nifty 50 — NTPC Limited (NTPC.NS)

Utilities — Power Generation (regulated, government-owned)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [3 of 10] Return bridge (N1): 1.8x / 5yrs = 12.5% p.a. -> EPS CAGR 14.6% x re-rating -1.8% | earnings share 115.8% Engine growth (5e): ROIIC 13.3% x RR 31.6% = 4.2% vs 14.6% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — not a scored concept for a regulated utility Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (70.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Payout ceiling, Moat trajectory, Runway/profit pool, Promoter alignment, Variant perception, MQF governance ``

**Why:** A cost-plus, CERC-regulated tariff structurally means no pricing power (rated RED, correctly) even though it gives real revenue certainty — the framework has no separate box for "safe but uncapped-upside," so that nuance lives in the notes. Long-PPA lock-in and a real ~90GW-to-149GW-by-2032 capacity target support switching costs/efficient scale, but the evidence is Tier 5 (press coverage), not Tier 1-3, so the moat-trajectory gate correctly doesn't clear despite the honest BUILDING call. NTPC's regulated-return ceiling and government-ownership overhang are long-standing, heavily-covered facts already reflected in a below-market ~13.6x P/E — no credible mispricing case either way, so N7 left honestly unanswered.

**Data quality:** Well-sourced (Tier 3): standalone revenue/PAT all 5 years, current price/market cap/P-E, promoter (government) holding trend (89.5%→75%→51.1%), capacity milestones. Flagged Tier 5: the entire EBITDA/depreciation/debt/working-capital series, with a disclosed cross-basis inconsistency (FY25 net-worth/debt anchors likely consolidated vs standalone PAT).

---

## Nifty Midcap 100 (sample) — Supreme Industries Limited (SUPREMEIND.NS)

Industrials — Plastic Piping & Products

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): 2.0x / 5yrs = 14.9% p.a. -> EPS CAGR 18.6% x re-rating -3.2% | earnings share 123.3% Engine growth (5e): ROIIC 14.3% x RR 63.3% = 9.1% vs 18.6% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (74.5/100) Price vs bridge: ABOVE Failed gates: Engine growth, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

**Why:** Debt-free with ~21.5% ROCE and clean governance, but pricing power was honestly rated RED/ERODING rather than assumed durable — real evidence surfaced a ~4.1% YoY realization correction from PVC-resin swings and explicit "competitive pricing" commentary against Astral, Finolex, Prince and Ashirvad. FY25→FY26 revenue growth decelerated to only ~7.4%, consistent with MATURE + share-flat rather than an inflection story. Already trades at a rich ~42-50x multiple that looks like the market pricing in Supreme's quality/scale leadership — no clear mispricing case in either direction, so N7 honestly unanswered.

**Data quality:** Well-sourced (Tier 3): FY25/FY26 revenue+PAT, ROCE/D-E/debt-free status, promoter holding, segment mix, peer P/E comparison. Flagged Tier 5: the full balance-sheet time series, ADTV and sector P/B (unsourced plausibility estimates).

---

## Nifty Smallcap 250 (sample) — Vijaya Diagnostic Centre Limited (VIJAYA.NS)

Healthcare — Diagnostics Chain (South India)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1):  $2.5x / 5yrs = 20.1\% \text{ p.a.} \rightarrow \text{EPS CAGR } 28.1\% \times \text{re-rating } -6.3\% \mid \text{earnings share } 135.2\%$  Engine growth (5e):  $\text{ROIIC } 36.3\% \times \text{RR } 26.8\% = 9.7\%$  vs 27.5% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (71.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Moat trajectory, Runway/profit pool, Variant perception, MQF governance ``

**Why:** A genuinely strong growth story — 5-year revenue/PAT CAGR near 20-24%, organized diagnostics still only ~17% of a highly fragmented market, Vijaya's own growth outpacing the ~12-14% organized-sector rate (real evidence for INFLECTION + share gain). But at a trailing ~90x P/E against a ~58x sector median, with an apparently unanimous bullish sell-side consensus already found in search, no credible "market has it wrong" case could be built in either direction — the moat evidence is real but regional (unproven outside Telangana/AP) and only Tier 4/5, so the trajectory gate correctly doesn't clear.

**Data quality:** Well-sourced (Tier 3/5): 5-year revenue/EBITDA/PAT, promoter holding (52.51%) and pledge (1.96%), price/market cap, network scale (166 centres). Flagged Tier 5: the full balance-sheet series — external sources disagreed sharply on ROCE (16.0% vs 27.23% in different snippets), so the model's own ROCE/ROIIC should be read as illustrative only.

---

## Nifty Microcap 250 (sample) — Ujjivan Small Finance Bank Limited (UJJIVANSFB.NS)

Financials — Small Finance Bank, MFI heritage (BFSI)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1):  $2.0x / 5yrs = 14.9\% \text{ p.a.} \rightarrow \text{EPS CAGR } 19.5\% \times \text{re-rating } -3.9\% \mid \text{earnings share } 128.7\%$  Engine growth (5e):  $\text{ROIIC } 427.3\% \times \text{RR } 4.9\% = 20.9\%$  vs 19.5% required revenue-driven CAGR — CLEARS (see BFSI note) Moat class (5b): NONE — MATM anchor applied 1.00x Runway/profit pool (6B): No addressable profit pool stated — not a scored concept for a lender Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ELEVATED (64.0/100) — Stage 2 sizing capped at WATCHLIST Price vs bridge: AT Failed gates: Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

**Why:** All six moat sources were honestly rated RED — for an MFI-heritage SFB, the sector's own documented borrower over-leveraging/multi-lending crisis is direct evidence *against* a switching-costs moat, not merely an absence of one. RBI returned both Ujjivan's and Jana's universal-bank licence applications in April 2026 for insufficient diversification — a concrete, recent, real setback. Governance came out ELEVATED (below the ACCEPTABLE floor needed for real sizing) on credit-cost volatility and MD/CEO turnover history. The stock is already up ~40% over the past year on an improving-asset-quality narrative; no rigorous N7 case distinct from what that rally already prices could be built.

**BFSI note:** the 20.9% engine-growth "CLEARS" result is the same known Section 5e artifact flagged for other lenders this week — not trusted as real signal; doesn't change the outcome given governance and moat both independently fail.

**Data quality:** Well-sourced (Tier 3): FY23-26 PAT, GNPA/NNPA trend (2.2%→4.5% peak stress→2.16% latest), CAR, 0% promoter holding (post reverse-merger), the RBI licence-rejection news. Flagged Tier 5: FY22 figures and the entire non-interest-income balance-sheet series.

---

## Today's summary

| Band                  | Stock              | Engine verdict                      | Compounder tier | Final call |
|-----------------------|--------------------|-------------------------------------|-----------------|------------|
| Nifty 50              | NTPC               | WEAK                                | WATCH           | WATCH      |
| Midcap 100 (sample)   | Supreme Industries | WEAK                                | WATCH           | WATCH      |
| Smallcap 250 (sample) | Vijaya Diagnostics | WEAK                                | WATCH           | WATCH      |
| Microcap 250 (sample) | Ujjivan SFB        | WEAK (clears engine, BFSI artifact) | WATCH           | WATCH      |

Third day running with no BUY/ACCUMULATE. The recurring pattern worth noting across all three days now: the most common reason a name doesn't even reach a *contested* verdict is that no agent could construct a credible, evidenced N7 variant-perception case — not a data-availability gap, but an honest finding that today's four businesses are already fairly-to-fully priced for what's known about them. That's the framework's M3 edge-hypothesis rule doing its job: absent a nameable reason the market is wrong, the ceiling is WATCH, regardless of how clean the rest of the business looks.
