

Daily Multibagger Coverage Report — 2026-09-19

One stock picked at random, without repeats until each list cycles through, from four market-cap bands. **Nifty 50 is a reliable list; the Midcap 100 / Smallcap 250 / Microcap 250 lists are hand-curated representative samples, not a live scrape of the official NSE index membership** — those official sources were unreachable from this environment. Every figure below is tagged by the framework's own Tier 1-5 source hierarchy in the underlying dossier files; most of today's figures are Tier 3 (aggregator-via-search) or Tier 5 (reconstructed/approximate), **not** Tier 1/2 verified. Treat this as a directional screen, not investment research.

Nifty 50 — Wipro Limited (WIPRO.NS)

Information Technology — Tier-1 IT Services

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [2 of 10] Return bridge (N1): 1.5x / 5yrs = 8.4% p.a. -> EPS CAGR 4.7% x re-rating 3.6% | earnings share 56.7% Engine growth (5e): ROIIC 165.6% x RR 1.9% = 3.2% vs 4.7% required revenue-driven CAGR — FAILS Moat class (5b): MODERATE — MATM anchor applied 1.25x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (77.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Payout ceiling, Moat trajectory, Runway/profit pool, Industry phase, Return bridge closes, Variant perception, MQF governance ``

Worst gate score of the week (2/10). Strong recent bookings (\$16.4B FY26, +14% YoY) haven't converted into revenue growth or peer-matching margins — Wipro's IT-services operating margin (17.2%) sits structurally below TCS/HCLTech, and 3-year revenue CAGR is flat (~0.8%) while peers grew. This reads as Wipro specifically losing ground within IT services, not just riding a maturing sector. The chronic ~12.6x trailing P/E discount to TCS/Infosys/HCLTech (14-20x) tracks real, multi-year underperformance rather than signaling a hidden opportunity — a fairly-priced laggard, not a mispriced compounder, so N7 honestly unanswered.

Data quality: Well-sourced (Tier 3): FY23-26 revenue/PAT, FY26 operating margin, bookings, promoter holding, peer P/Es. Flagged Tier 5: most of the balance-sheet series. Two genuine cross-source conflicts (ROCE 20.3% vs 29.6%; book value Rs83.92 vs Rs60.71) disclosed rather than resolved; one implausible cash-figure search result discarded outright.

Nifty Midcap 100 (sample) — AU Small Finance Bank Limited (AUBANK.NS)

Financials — Small Finance Bank (vehicle/MSME lending heritage)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): 3.0x / 7yrs = 17.0% p.a. -> EPS CAGR 22.4% x re-rating -4.4% | earnings share 128.7% Engine growth (5e): ROIIC 318.3% x RR 4.8% = 15.3% vs 22.4% required revenue-driven CAGR — FAILS (BFSI artifact) Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — not scored for a lender Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (71.5/100) Price vs bridge: AT Failed gates: Engine growth, Runway/profit pool, Promoter alignment, Variant perception, MQF governance ``

The strongest of this week's three SFB names (after Ujjivan and, indirectly, Aavas/Can Fin) — RBI's first-ever in-principle universal-bank approval for an SFB (Aug-2025), best-in-cohort NIM and cost-to-income, correctly rated INFLECTION (not MATURE like Ujjivan) since the licence conversion is a concrete structural change unique to AU. But

no moat source rates GREEN either: AU's own credit-card/personal-loan/microfinance-adjacent GNPA genuinely deteriorated (1.98%→2.41%→2.10% through FY25-26), and the licence remains in-principle, not final. At ~4x book/~30x earnings with heavy brokerage coverage, it looks close to fully priced — a different failure mode than Ujjivan's (priced-in strength vs. unresolved stress).

Data quality: Well-sourced (Tier 2/3): FY22-26 PAT/NII, Q1FY27 GNPA/NNPA/CAR, CASA ratio, current price/book value, the full RBI licence-approval timeline. Flagged Tier 5: most balance-sheet detail. A suspiciously low retail-GNPA figure from one aggregator was identified as inconsistent with every other source and discarded.

Nifty Smallcap 250 (sample) — Indian Overseas Bank (IOB.NS)

Financials — Public Sector Bank (former RBI Prompt Corrective Action)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [3 of 10] Return bridge (N1): 2.0x / 5yrs = 14.9% p.a. -> EPS CAGR 22.1% x re-rating -5.9% | earnings share 144.2% Engine growth (5e): ROIIC 298.3% x RR 2.8% = 8.2% vs 22.1% required revenue-driven CAGR — FAILS (BFSI artifact) Moat class (5b): MODERATE — MATM anchor applied 1.25x Runway/profit pool (6B): No addressable profit pool stated — not scored for a lender Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ELEVATED (61.0/100) — Stage 2 sizing capped at WATCHLIST Price vs bridge: BELOW Failed gates: Engine growth, Moat trajectory, Runway/profit pool, Industry phase, Promoter alignment, Variant perception, MQF governance ``

Today's most decision-relevant real-world finding, outside the framework's own gates. Government of India holds ~92.44% of IOB against a 25% minimum-public-shareholding rule — and the regulatory forbearance deadline for compliance (Aug 1, 2026) has already passed as of today with no compliance confirmed, implying an ongoing, price-suppressing dilution overhang (OFS/QIP) that's largely independent of operating performance. The asset-quality turnaround since exiting PCA is real but several years old and already reflected in a premium-to-PSU-peer valuation (~10.7-12x P/E vs ~7.4x sector) — the opposite of a coverage-neglect setup.

Data quality: Well-sourced (Tier 3): FY22-26 PAT/income, PCA entry/exit history, CAR, government-shareholding trend and the MPS deadline situation. Flagged Tier 5: the full non-interest balance-sheet series. Two different public-float percentages across sources disclosed rather than reconciled.

Nifty Microcap 250 (sample) — Mahamaya Steel Industries Limited (MAHASTEEL.NS)

Materials — Secondary/Structural Steel (MS billets, sponge iron, TMT bars)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [3 of 10] Return bridge (N1): 3.0x / 5yrs = 24.6% p.a. -> EPS CAGR 92.8% x re-rating -35.4% | earnings share 298.9% Engine growth (5e): ROIIC 3.1% x RR 185.3% = 5.8% vs 92.8% required revenue-driven CAGR — FAILS Moat class (5b): NARROW — MATM anchor applied 1.10x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ELEVATED (56.0/100) — Stage 2 sizing capped at WATCHLIST Price vs bridge: ABOVE Failed gates: Engine growth, ROIIC floor, Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

A genuine ticker-hygiene catch worth flagging for the universe list. A similarly-named but unrelated company ("Maa Mahamaya Industries Limited," Andhra Pradesh) surfaced in search results and was correctly identified as a

different entity and excluded — this kind of name confusion is a real risk in microcap research and the agent caught it rather than blending the two. On the merits: sub-cost-of-capital ROCE (~6.9-7.4%), no evidenced moat (5 of 6 sources RED), a mature/oversupplied sub-sector — and most strikingly, the stock has already run **+240% in the trailing year** to ~126x trailing earnings with no fundamental re-rating case to support it. This reads as a speculative microcap run ahead of fundamentals, not an overlooked compounder — N7 correctly left unanswered rather than chasing the momentum with a manufactured thesis.

Data quality: Well-sourced (Tier 3): FY21-25 revenue/PAT, ROCE/ROE/D-E, promoter holding, the 52-week price range. Flagged Tier 5: the full balance-sheet series. A 2018 SEBI PIT-disclosure item was found, assessed as routine (not an active fraud finding), and disclosed rather than either ignored or over-weighted into a kill-gate.

Today's summary

Band	Stock	Engine verdict	Compunder tier	Final call
Nifty 50	Wipro	WEAK (2/10, worst of the week)	WATCH	WATCH
Midcap 100 (sample)	AU Small Finance Bank	WEAK	WATCH	WATCH
Smallcap 250 (sample)	Indian Overseas Bank	WEAK	WATCH	WATCH
Microcap 250 (sample)	Mahamaya Steel Industries	WEAK	WATCH	WATCH

Seventh day, seventh day with no BUY/ACCUMULATE. Today's research surfaced two things worth carrying forward: a real ticker-identity risk in the microcap universe (correctly caught, not a bad list entry) and a material real-world fact — IOB's overdue minimum-public-shareholding deadline — that sits outside the framework's own gate vocabulary entirely but is exactly the kind of thing the M6 "Tier 1-3 evidence, dated and cited" discipline is designed to surface when an agent is paying attention rather than mechanically filling in fields.

Full dossiers with per-field source tiers: `multibagger/sample_data/daily/{WIPRO,AUBANK,IOB,MAHASTEEL}.json`.
