

Daily Multibagger Coverage Report — 2026-09-18

One stock picked at random, without repeats until each list cycles through, from four market-cap bands. **Nifty 50 is a reliable list; the Midcap 100 / Smallcap 250 / Microcap 250 lists are hand-curated representative samples, not a live scrape of the official NSE index membership** — those official sources were unreachable from this environment. Every figure below is tagged by the framework's own Tier 1-5 source hierarchy in the underlying dossier files; most of today's figures are Tier 3 (aggregator-via-search) or Tier 5 (reconstructed/approximate), **not** Tier 1/2 verified. Treat this as a directional screen, not investment research.

Nifty 50 — ICICI Bank Limited (ICICIBANK.NS)

Financials — Private Sector Bank

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [4 of 10] Return bridge (N1): $2.0x / 5\text{yrs} = 14.9\% \text{ p.a.}$ -> EPS CAGR 16.6% x re-rating -1.5% | earnings share 110.7% Engine growth (5e): $\text{ROIIC } 711.5\% \times \text{RR } -5.0\% = -35.7\%$ vs 16.6% required revenue-driven CAGR — FAILS (BFSI artifact) Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — not a scored concept for a lender Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (78.0/100) Price vs bridge: AT Failed gates: Engine growth, Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

Why: Genuinely one of India's best-run large banks — 3 of 6 moat sources rated GREEN (pricing power, switching costs, efficient scale), not by reputation but by evidenced qualitative strength. But every source found this session was Tier 5 (media/aggregator), never a filing, so the moat-trajectory gate correctly can't clear on sourcing quality alone. No promoter since the 2002 merger means the historical 2018 Chanda Kochhar/Videocon matter is a resolved footnote against current management, not a live concern. ICICI is one of the most heavily-covered, most institutionally-owned (~70%+) banks in India — no credible mispricing case either way, N7 honestly unanswered.

Data quality: Well-sourced (Tier 3): PAT FY22-26, net/gross NPA, CAR, CASA, NIM, BVPS, current price/market cap/P-E/P-B. Flagged Tier 5: the full non-interest balance-sheet series (most concepts don't map cleanly to a bank anyway). A genuine ~60% total-income discrepancy across sources (likely standalone vs. consolidated-group) was found and disclosed rather than resolved.

Nifty Midcap 100 (sample) — Alkem Laboratories Limited (ALKEM.NS)

Pharmaceuticals — Domestic Branded Generics (Acute/Anti-Infectives)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): $3.0x / 5\text{yrs} = 24.6\% \text{ p.a.}$ -> EPS CAGR 21.9% x re-rating 2.2% | earnings share 90.0% Engine growth (5e): $\text{ROIIC } 63.5\% \times \text{RR } 51.9\% = 32.9\%$ vs 20.1% required revenue-driven CAGR — CLEARS (flagged artifact, see below) Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (68.5/100) Price vs bridge: ABOVE Failed gates: Runway/profit pool, Industry phase, Promoter alignment, Variant perception, MQF governance ``

Today's most important methodological catch. Alkem clears engine growth outright (32.9% vs 20.1% required) — but the agent flagged this honestly as a lookback-window artifact: the 3-year ROIIC calculation lands on FY23, a

genuine, reported margin trough (net margin collapsed 15.8%→8.7% that year), which mechanically inflates the computed incremental-capital-productivity figure. The underlying business is closer to a 7-9% revenue-CAGR mature compounder with margins now stabilizing near 20% — not the 33%-growth-engine the raw number implies. Pricing power was correctly rated RED/ERODING (DPCO/NLEM price caps on much of the acute-therapy portfolio) rather than assumed strong just because it's a large pharma brand. Real evidence on both sides (margin expansion + IQVIA-cited share gains vs. falling promoter holding via block deals + an unresolved May-2026 USFDA Form-483 at Daman) meant no confident N7 case could be built either way.

Data quality: Well-sourced (Tier 3): FY21-26 revenue/PAT, FY24-26 EBITDA margin, promoter-holding decline with named block deals, the Daman Form-483, IQVIA share data. Flagged Tier 5: FY21-23 EBITDA margin and most of the balance-sheet series.

Nifty Smallcap 250 (sample) — KPR Mill Limited (KPRMILL.NS)

Textiles — Vertically Integrated Yarn/Fabric/Garment Export + Sugar/Ethanol

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): $2.0x / 5yrs = 14.9\% \text{ p.a.} \rightarrow \text{EPS CAGR } 21.1\% \times \text{re-rating } -5.1\% \mid \text{earnings share } 138.0\%$ Engine growth (5e): $\text{ROIIC } 28.8\% \times \text{RR } 33.0\% = 9.5\%$ vs 19.6% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied $1.50x$ Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (74.5/100) Price vs bridge: ABOVE Failed gates: Engine growth, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

Why: A real sourcing catch worth flagging: one aggregator headline read "KPR Mill declares 500% dividend" — the agent didn't take it at face value and checked further, finding it's Rs5/share total on a Re1 face value (a normal ~20% payout), not a near-100%-of-PAT special distribution. The underlying business is a solid, low-leverage (net cash) exporter with real backward integration and a growing ethanol sub-segment (+34% YoY, a genuine structural tailwind), but pricing power is honestly RED/ERODING (commodity-input, price-taking export model exposed to the 2025-26 US tariff escalation) and the moat overall rated weak-to-moderate. Already re-rated ~37% off its 52-week low to a premium-to-peers ~42x — no credible mispricing case, N7 unanswered.

Data quality: Well-sourced (Tier 3): FY24-26 revenue/PAT/EBITDA, promoter holding (67.52%, unpledged), D/E (~0.09x, net cash), segment mix. Flagged Tier 5: FY22 figures and most balance-sheet detail; two live cross-source conflicts (FY26 EBITDA margin, US revenue-exposure estimate) disclosed rather than resolved.

Nifty Microcap 250 (sample) — Can Fin Homes Limited (CANFINHOME.NS)

Financials — Housing Finance (Canara Bank-promoted, salaried/formal-income segment)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [4 of 10] Return bridge (N1): $3.0x / 7yrs = 17.0\% \text{ p.a.} \rightarrow \text{EPS CAGR } 10.2\% \times \text{re-rating } 6.2\% \mid \text{earnings share } 61.9\%$ Engine growth (5e): $\text{ROIIC } 2205.9\% \times \text{RR } 0.2\% = 3.7\%$ vs 10.2% required revenue-driven CAGR — FAILS (BFSI artifact) Moat class (5b): MODERATE — MATM anchor applied $1.25x$ Runway/profit pool (6B): No addressable profit pool stated — not scored for a lender Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (74.0/100) Price vs bridge: BELOW Failed gates: Engine growth, Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

Why: The week's second affordable-housing-finance comparison (after Aavas on Wednesday), and a genuinely cleaner governance read (99.66%-approved MD/CEO reappointment vs. Aavas's MD/CFO/CRO resignation cluster). The agent specifically tested the "Canara Bank promoter gives a funding-cost edge" hypothesis rather than assuming it — and found a rating-agency source explicitly stating Can Fin's cost of funding is "broadly in line with similarly rated peers," so cost advantage was correctly capped at AMBER, not GREEN. The honest finding: salaried/formal-income home loans are actually *less* differentiated than Aavas's informal-income niche, since banks with cheap CASA funding can poach the same "most bankable" customers via balance transfer.

Data quality: Well-sourced (Tier 3): Q1 FY27 PAT/AUM/GNPA/NNPA/ROA/ROE/CRAR, FY23-26 PAT/income/EPS, Canara Bank's 29.99% holding, credit ratings. Flagged Tier 5: full balance-sheet series, sourced from a small partial peer basket for sector P/E.

Today's summary

Band	Stock	Engine verdict	Compounder tier	Final call
Nifty 50	ICICI Bank	WEAK	WATCH	WATCH
Midcap 100 (sample)	Alkem Laboratories	WEAK (clears engine, flagged artifact)	WATCH	WATCH
Smallcap 250 (sample)	KPR Mill	WEAK	WATCH	WATCH
Microcap 250 (sample)	Can Fin Homes	WEAK	WATCH	WATCH

Sixth day, sixth day with no BUY/ACCUMULATE. Two research-quality catches stand out today beyond the verdicts themselves: KPR Mill's agent caught a misleading "500% dividend" headline before it could distort the dossier, and Alkem's agent caught its own engine clearing the gate for the wrong reason (a lookback window landing on a real margin trough) rather than reporting the pass at face value. Both are exactly the kind of adversarial scrutiny the framework's M5 protocol asks for, applied correctly even under single-pass, search-only research conditions.
