

Daily Multibagger Coverage Report — 2026-09-21

One stock picked at random, without repeats until each list cycles through, from four market-cap bands. **Nifty 50 is a reliable list; the Midcap 100 / Smallcap 250 / Microcap 250 lists are hand-curated representative samples, not a live scrape of the official NSE index membership** — those official sources were unreachable from this environment. Every figure below is tagged by the framework's own Tier 1-5 source hierarchy in the underlying dossier files; most of today's figures are Tier 3 (aggregator-via-search) or Tier 5 (reconstructed/approximate), **not** Tier 1/2 verified. Treat this as a directional screen, not investment research.

Operational note: two of today's four research agents (IPCA Labs, BEML) hit a session-level API rate limit mid-run and could not deliver their usual narrative hand-back. Both had already saved complete, valid dossiers and run the engine successfully before the limit hit — this report recovered their Final Call Blocks and judgement notes directly from the saved files rather than re-running the research.

Nifty 50 — Eicher Motors Limited (EICHERMOT.NS)

Automobiles — Royal Enfield Motorcycles + VECV Commercial Vehicles JV

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [5 of 10] Return bridge (N1): 2.5x / 7yrs = 14.0% p.a. -> EPS CAGR 17.6% x re-rating -3.1% | earnings share 123.9% Engine growth (5e): ROIIC 114.7% x RR 13.8% = 15.8% vs 17.6% required revenue-driven CAGR — NEAR-MISS (soft-fail) Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): Implied profit-pool share at target 122.8% > 25% — RED Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (82.5/100) Price vs bridge: ABOVE Failed gates: Runway/profit pool, Return bridge closes, Variant perception, MQF governance ``

Why: A genuine mixed-bag moat, not a blanket "wide moat" story — real, evidenced export momentum (23% FY26 export growth, 49% YoY in H1, 80+ markets) earns GREEN/AMBER on brand and cost advantage, but switching costs are honestly RED (no real lock-in in motorcycle ownership) and efficient_scale was rated ERODING as Bajaj-Triumph, Hero-Harley X440 and Honda now launch directly into Royal Enfield's core 350-450cc band — Q1 FY26 EBITDA growth (+3.2%) already badly lags revenue growth (+14.8%). Correctly noted: VECV is equity-accounted, not consolidated, into Eicher's reported revenue/EBITDA. At ~40x+ trailing on a heavily-covered Nifty 50 name, no credible mispricing case, N7 honestly unanswered.

Data quality: Well-sourced (Tier 3): FY25 revenue/PAT, Royal Enfield volume/export data, ROCE/ROE/D-E, promoter holding. Flagged Tier 5: FY21-24 balance-sheet series; the framework's own computed ROCE (~21%) is materially lower than the externally-reported ~31.7%, disclosed as an unresolved discrepancy.

Nifty Midcap 100 (sample) — IPCA Laboratories Limited (IPCALAB.NS)

Pharmaceuticals — Domestic Branded Generics + Anti-Malarial API/Institutional

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [3 of 10] Return bridge (N1): 2.5x / 5yrs = 20.1% p.a. -> EPS CAGR 28.3% x re-rating -6.4% | earnings share 136.0% Engine growth (5e): ROIIC 17.8% x RR 53.3% = 9.5% vs 28.3% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (69.0/100) Price vs bridge: ABOVE Failed gates: Engine growth, Moat trajectory, Runway/profit pool, Industry phase, Promoter alignment,

Variant perception, MQF governance ``

Why: A genuine decade-long USFDA compliance improvement (2015-16 warning letter → 2023 clearance at Ratlam/Piparia) that nonetheless produced a fresh Form-483 as recently as Dec-2025 — correctly rated HOLDING everywhere, not BUILDING, since the moat isn't fully resolved. Promoter holding drifted down (~46.3%→44.7% over 3 years), most plausibly financing-related dilution around the 2022-23 Unichem Laboratories acquisition rather than an exit — but the framework's Section 5f test can't distinguish the two from the percentage series alone, so it's carried through honestly rather than smoothed over. At a ~50% one-year re-rating to ~60x+ trailing (a premium to an already-rich ~40.5x Nifty Pharma index), no credible mispricing case in either direction.

Data quality: Well-sourced (Tier 3): FY25 revenue/PAT/EBITDA, ROCE, D/E, promoter holding trend, the full USFDA inspection timeline, the Unichem acquisition terms. Flagged Tier 5: FY23 figures (derived, not cited) and most balance-sheet detail.

Nifty Smallcap 250 (sample) — SKF India Limited (SKFINDIA.NS)

Automobile / Auto Ancillaries — Precision Bearings (SKF AB, Sweden)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [3 of 10] Return bridge (N1): 2.0x / 5yrs = 14.9% p.a. -> EPS CAGR 16.3% x re-rating -1.2% | earnings share 108.9% Engine growth (5e): ROIIC 26.8% x RR 37.2% = 10.0% vs 16.3% required revenue-driven CAGR — FAILS Moat class (5b): MODERATE — MATM anchor applied 1.25x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): MATURE + share-flat — caps at Steady Compounder MQF governance: ACCEPTABLE (72.5/100) Price vs bridge: ABOVE Failed gates: Engine growth, Payout ceiling, Moat trajectory, Runway/profit pool, Industry phase, Variant perception, MQF governance ``

A structural change caught mid-stream. SKF India completed a scheme of arrangement effective 1-Oct-2025, demerging its industrial-bearings/distribution business into a newly listed twin (SKF India Industrial Ltd) — leaving SKFINDIA.NS a pure-play automotive bearings supplier for the first time. The agent also caught a data-confusion risk: one PAT figure found in search actually belonged to the newly-separate industrial entity, not this one, and was correctly excluded rather than blended in (similar to the ticker-identity catches earlier this week). SKF's cheapest-of-peers P/E (~38-45x vs Timken ~58-61x, Schaeffler ~50-62x) is at least as plausibly a fair discount for a narrower, newly-standalone business as a mispricing — N7 honestly unanswered.

Data quality: Well-sourced (Tier 3/4): current price/market cap, the Oct-2025 demerger, Q1 FY27 standalone revenue. Flagged Tier 5: the full 6-year FinancialSeries is a backcast from a single anchor; FY26 PAT itself could not be pinned down (three mutually inconsistent figures found, one belonging to the wrong entity), so a normalized estimate was used and disclosed.

Nifty Microcap 250 (sample) — BEML Limited (BEML.NS)

Capital Goods — Defence, Rail & Metro, Mining & Construction (Government-owned)

`` FINAL CALL: WATCH Compounder tier: WATCH Engine verdict: WEAK — consolidated gates passed [6 of 10] Return bridge (N1): 1.8x / 5yrs = 12.5% p.a. -> EPS CAGR 36.5% x re-rating -17.6% | earnings share 264.9% Engine growth (5e): ROIIC -1.1% x RR 229.8% = -2.4% vs 36.5% required revenue-driven CAGR — FAILS Moat class (5b): WIDE — MATM anchor applied 1.50x Runway/profit pool (6B): No addressable profit pool stated — cannot evidence gate Industry phase (6A): INFLECTION — clears MQF governance: ACCEPTABLE (66.0/100) Price vs bridge: ABOVE Failed gates: Engine growth,

Runway/profit pool, Variant perception, MQF governance ``

Why: A real, multi-segment PSU industrial (Rail & Metro/Defence/Mining) with a record Rs15,896Cr order book and FY27 inflow guidance above Rs31,000Cr — but FY26 standalone PAT nearly halved (to ~Rs141-148Cr from ~Rs292.5Cr) despite record revenue, with EBITDA margin compressing ~570bps. At a rich 90-118x trailing P/E, the market is already underwriting an aggressive margin-recovery-and-order-conversion story, not treating BEML as cheap. The often-cited "privatization upside" thesis was specifically checked and found stale: the Cabinet approval, PIM/EOI issuance, and transaction-advisor appointment all trace to 2019-2021, with no confirmed resumption found in 2024-2026 — correctly declined to treat an old, dormant process as a live catalyst.

Data quality: Well-sourced (Tier 3): FY22-26 revenue/PAT, order book composition and inflow guidance, promoter (government) holding, the 2025 stock split. Flagged Tier 5: most balance-sheet detail; a genuinely conflicting set of per-share dividend figures (Rs5.55/12.28/18.70/20.50 across sources, likely a mix of interim/final and pre-/post-split counts) was found and a payout-ratio model used instead of guessing among them.

Today's summary

Band	Stock	Engine verdict	Compounder tier	Final call
Nifty 50	Eicher Motors	WEAK (near-miss engine)	WATCH	WATCH
Midcap 100 (sample)	IPCA Laboratories	WEAK	WATCH	WATCH
Smallcap 250 (sample)	SKF India	WEAK	WATCH	WATCH
Microcap 250 (sample)	BEML	WEAK	WATCH	WATCH

Ninth day, ninth day with no BUY/ACCUMULATE. Two operational notes for the record: this was the first day a session-level rate limit interrupted research agents mid-run, and the pipeline recovered cleanly because each agent had already persisted its dossier and engine output to disk before hitting the limit — the compiled report lost none of the day's substance, only the agents' own narrative summaries, which were reconstructed from the saved notes fields instead. Two more corporate-structure catches this week (SKF India's Oct-2025 demerger, following Eicher's VECV equity-accounting and last week's REC-PFC merger) reinforce that checking *what entity the numbers actually describe* is turning out to be one of the highest-value things these agents do.
